

## An Introduction to Apollo 3

Garrett Stevens, Dario Beraldi, Shashank Gowda October 23, 2024

### What to expect

Brief introduction to Apollo 3

Hands-on demonstration using GitPod

# Hopefully I can answer for you

What even is Apollo anyway?

Why is it "3", and how is it different?

### What is Apollo 3?

- A JBrowse 2 plugin
- A way to edit data that's in JBrowse
- A server that works with the plugin

### What is it used for?

Usually used for "manual annotation" or "curation" of genes

"Incorrect annotations poison every experiment that makes use of them ... Worse still, the poison spreads because incorrect annotations from one organism are often unknowingly used by other projects to help annotate their own genomes."

Yandell and Ence 2012, doi:10.1038/nrg3174

# Why Apollo "3"?

### Apollo 1

## Apollo 2, aka "Web Apollo"

### Otter

### **Artemis**

## Apollo 3

Apollo 1 → Apollo 2 → Apollo 3

OR

Apollo + Artemis + Otter = Apollo 3

# Apollo 3 in JBrowse 2

### New features in JBrowse 2

- Linear syntenty view (pictured)
- Sort and filter alignments tracks
- Flip linear views
- View multiple regions at once

### Status

- Beta release
- Many new UI features coming
- Install on server with Node.js and MongoDB
- Or use Docker
